For example, all water used in a building that contains both non-residential and multi-family uses will be billed at the non-residential consumption rate.

Meter readings from meters that measure flow in 1,000 gallon increments shall be converted to hundred cubic foot units prior to applying the appropriate consumption charge for calculating the water bill.

Water used during construction of a building shall be metered and billed at the rate appropriate for the type of facility being constructed. For example, water used during construction of a single-family residence will be billed at the residential rate. When, during construction, setting a meter is impracticable, the amount of water used shall be estimated and billed at the appropriate rate for the type of facility being constructed.
